Course summary

Have you ever wondered about how information and technology have impacted healthcare? What influence does all this have on how a day-to-day clinical role is carried out? This free course, An introduction to data and information in health and social care, will help you to understand the ways computers and technology work with health data to produce information, and how exactly this impacts patient care.

Learning outcomes

By completing this course, the learner should be able to:

- identify some of the instances in a care setting where a computer is, or is likely to be, involved
- describe, in simple terms, the difference between data and information
- give a simple explanation of why computers are important to people working in health and social care in terms of data and information
- explain in simple terms what a computer program is, and why one is necessary
- explain the role of the computer with respect to the data given to it and how this can improve health and social care delivery.

Completed study

The learner has completed the following:

Section 1

What this course is about

Section 2

Daily life and computers

Section 3

Sensing data and turning it into something usable

Section 4

Computers as tools for finding

Section 5

Genetic databases and disease

Section 6

COVID-19 and the importance of data and technology as a tool

Section 7

Controlling things; selling things
